

Detectaplast® Universal 19*72mm

Art. 8140.0

Blue detectable plasters, catering plasters, are widely used in areas of food preparation from sandwich shops to butchers to cake manufacturers to large scale mass produced food lines. The plasters are directly detected because of their blue color (there are no natural food products that are blue) but also because of an aluminium foil under the wound pad which can be detected by metal detectors. The Detectaplast® Universal waterproof plasters have following characteristics :

- made of very strong PE (poly-ethylene) material
- water and dirt resistant
- visually and electromagnetically detectable
- blue color to assist detection
- strong hypoallergenic adhesive ensures fewer skin reactions
- absorbant wound pad does not stick to the wound
- latex-free
- aluminium strip under wound pad
- according to the HACCP, IFS, BRC standards
